

WESLEY HUANG

Portfolio

Full Stack Web Developer

As a young child I always had a creative mind and chose to pursue my passion for the arts at School of Visual Arts, New York City graduating with a BFA in film production. After moving to LA and working as video editor for 2 years I discovered how creative it was to write code. Discovering how creative one could be in programming, coding became very attractive to me and grew into a passion. I wanted to further my education in Tech and I moved to Utah, Provo to attend Devmountain. At Devmountain and taking the course ignited my desire to learn and grow as a web developer and continue to learn and build amazing software.

Technologies

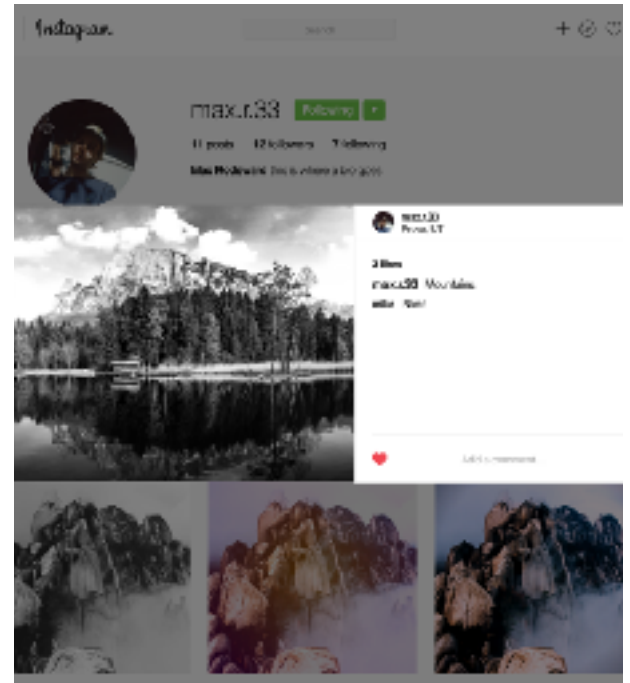

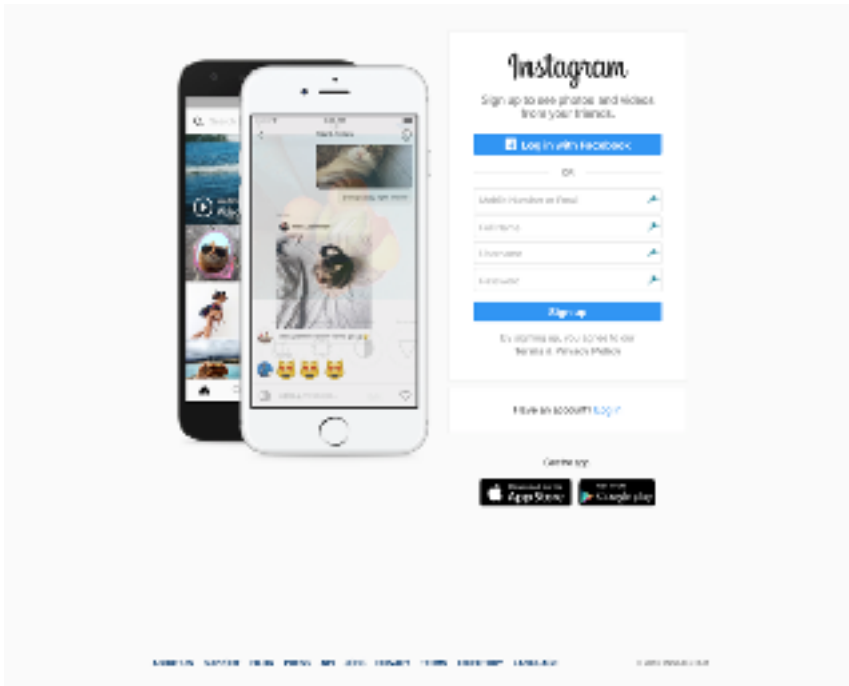

- HTML/CSS
- ANGULARJS
- REACTJS
- NODEJS
- EXPRESS
- SQL
- JQUERY
- MONGODB
- AMAZON S3
- SASS
- FACEBOOK AUTH
- WEBPACK

INSTAGRAM-CLONE

Full Stack Web Application

Features

A clone of the Instagram web app with addition to upload photos and applying filters from computer or phone. Logging in with local auth users can choose to follow people and see their posts on their own feed. Comments and likes are executed in real time, which will be added to a user notifications.

Setting up Amazon S3 and have photos be uploaded with a link attached to them was complicated in the setup. Re-using components to be modified for a different view was tricky in execution, but careful understanding of how the component was created assisted in the build process.

FANFLIX

Full Stack Web Application

Features

A Movie database website that allows user to search up to 900,000 movie titles. Searching is done in real time using JQuery keyup, along with people and movie theaters. Users can browse movie detailed pages for every searchable movie, included are trailer, posters, backdrops and recommendations for the movie. Users can search for movie theaters in their area and get showtimes at that theater. When logging in clients will be able to create their own movie list and once added can write a review and give a score for the movie.

WEZ ON FILM

Full Stack Web Application

Features

A Movie review website where I write reviews based on my thoughts as a filmmaker. I works like a personal blog for me. Users visiting the site can see a library of the movies I watched and reviewed and see a library of my favorite movies. As an admin I can add movies to my own library and write reviews storing them in the SQL database. Each review page has a trailer accompanying with it and details about the movie at the bottom.

Angular had some issues with concatenation of embedded youtube videos and cannot be bound to the dom properly. Had to figure out a trust function and set that as the embedded video link.

Technologies

- ▶ ANGULARJS
